

Assignment – DJ Project

For this project, you will be using Audacity to create a MP3 that will have you filling in the audio between two songs just like if you were working at a radio station. You will give the song title and artist of the song that just ended and you will then introduce the next song and artist as well as little extra information as the song begins to play. The final MP3 created will be posted on your web site. Post this project on a **New** page named “**Podcasts**”. This page should be placed between the *Images* and *Social Networks* pages.

REQUIREMENTS:

- ❖ Final 15 – 30 seconds of the first song that will Fade Out
- ❖ Recorded audio that gives:
 - Artist and song title of first song
 - Little extra information or tidbit about that song
 - Introduction of next song and artist
 - Little extra information about next song
- ❖ First 30 seconds of second song
 - First 15 seconds will Fade In
 - Last 10 seconds will Fade Out
 - Overall length of created MP3 should between 60 – 90 seconds long
- ❖ Posting of MP3 on your web site’s Podcasts page
